

IN THE CLAIMS

1. (Currently Amended) Door with a door leaf which can be moved between an open position and a closed position; with a guide rail arrangement to guide the movement of the door leaf; with a fastening arrangement for attaching a rail element of the guide rail arrangement to a wall containing the opening to be closed by the door leaf, the fastening arrangement comprising a plurality of fastening elements, each of which can be fixed on one side to the wall and on the other side to the rail element; and with tensioning means, which can be fixed in position at one end to the door leaf and at the other end to a drive device and/or a counterbalancing device, where at least one of the fastening elements is designed essentially in the form of an angle piece with two sidepieces preferably enclosing an angle of 90° with each other, and where the first sidepiece can be attached to the wall, the second sidepiece to the rail element, ~~characterized in that~~ wherein the guide rail arrangement is provided with at least one protective element, which can be attached to at least one of the fastening elements and which serves to bridge the gap between the rail element and the wall, and in that the second sidepiece has a receiving area in the form of a pressed-out section to accept a fastening area of the protective element.

2. (Currently Amended) Door according to Claim 2, ~~characterized in that~~ wherein the protective element can be removably attached to at least one of the fastening elements and/or to the rail element.
3. (Currently Amended) Door according to ~~Claim 1 or Claim 2,~~ ~~characterized in that~~ Claim 1, wherein a boundary surface of the fastening area has a profiling, which arrives in contact with a boundary surface of the second sidepiece and prevents the protective element from separating from the fastening element.
4. (Currently Amended) Door according to ~~one of the preceding claims,~~ ~~characterized in that~~ Claim 1, wherein the protective element has a cover area, where, between a boundary surface of the second sidepiece opposite the rail element and the cover area, an intermediate space is formed, which is designed to receive the fastening means serving to attach the rail element to the second sidepiece.
5. (Currently Amended) Door according to ~~one of the preceding claims,~~ ~~characterized in that~~ Claim 1, wherein the protective element consists at least partially of plastic.

6. (Currently Amended) Door according to ~~one of the preceding claims, characterized in that~~ Claim 1, wherein the door leaf has a plurality of panels, which are hinged to each other with axes extending more-or-less perpendicular to the rail element.
7. (Currently Amended) Guide rail arrangement for a door according to ~~one of the preceding claims~~ Claim 1 with a rail element, which can be attached to a wall; with a fastening arrangement with a plurality of fastening elements, which can be attached on one side to the wall and on the other side to the rail element; with at least one protective element, which can be attached to the rail element and/or to at least one of the fastening elements and which serves to bridge the gap formed between the rail element and the wall, where the first sidepiece can be attached to the wall, the second sidepiece to the rail element, ~~characterized in that~~ wherein the second sidepiece has a receiving area in the form of a pressed-out section to accept a fastening area of the protective element.
